

B303

AUTOMOTIVE ANTIFREEZE -50°C (READY TO USE)

This product provides superior corrosion protection while preventing winter freezing. In summer it acts as a coolant preventing summer boil-over. This product is silicone and silicate free and can be added as is without dilution to radiator. It is compatible for use in diesel and all other automotive engines.

NOTE: For maximum corrosion protection, antifreeze should be replaced annually.

DIRECTIONS: Always consult your Owner's Manual. May be added to provide desired reservoir level. To replace antifreeze solution, drain the system. If rusty or dirty, it should be cleaned. Examine all hoses, clamps and replace if needed. Fill system with soft or de-ionized water. Run engine with heater on high until warm. Thoroughly drain system again. Repeat until drained water is clear.
