LIQUID MELT

This product is designed to prevent ice build-up, remove ice and prevent products from sticking to conveyor belts. It contains selected dispersants and release agents to provide complete and even dispersal of the de-icing solution.

It is non-corrosive and will not harm conveyor belting or metal running gear. It will help keep belts pliable and reduce belt hardening. This in turn helps prevent the product from back sliding on the belt.

Liquid Melt provides freezing protection to -50°C .

DIRECTIONS: For most effective and economical use, adjust strength of solution to compensate for current temperature by diluting with water.
