VEGEFOAM DEGREASER

VegeFoam is a viscous high-foaming industrial degreaser that rapidly penetrates and emulsifies grease, oil and carbon soot. It is a fully biodegradable, methyl ester (biodiesel) based emulsifying detergent that is derived from sustainable vegetable oil origins. It is non-corrosive, non-combustible and unregulated for transport. This low odour degreaser is formulated with superb de-oiling surfactants for removal of the toughest hydrocarbon soils and a package of wetting agents that provide excellent rinsability. VegeFoam is an environmentally responsible product designed with workers' safety in mind.

DIRECTIONS: VegeFoam is a versatile degreaser that can be used straight to maximize clinging to a vertical surface, can be diluted 1:1 with water for use with foaming applicators or can be further diluted up to 1:50 for light duty cleaning and degreasing. Remove excess grease and soil. Apply VegeFoam using a nylon brush, rag, spray bottle or foamer. Allow sufficient contact time for maximum efficacy. Scrub the area to be cleaned. Best results are obtained when rinsing with steam or hot water using a power washer.

MATERIAL COMPATIBILITY: VegeFoam is formulated with biodiesel. It is non-corrosive to steel or soft metals. Due to biodiesel's high solvency, soft rubbers are particularly vulnerable and may swell or break down with prolonged exposure.

COMPATIBLE MATERIALS: Teflon, Nylon, Viton® fluoroelastomers, fluorinated plastics, fiberglass, stainless steel, carbon steel, aluminum, nickel, brass.

SUSCEPTIBLE MATERIALS: Natural rubber, nitrile rubber, polypropylene, polyvinyl, Tygon®. Always spot test on non-essential components.
