GREASE-STRIP GEL

This product is a viscous degreaser for grills, barbecues and other heavy duty applications. This product contains surfactants to provide superior wetting and penetration to remove baked on grease. The viscosity allows longer contact time, less dripping and therefore less waste.

DIRECTIONS: Spray or brush onto warmed surface to be cleaned 54-65°C (130-150°F). Cover soiled areas completely. Allow to penetrate grease deposits for 10-15 minutes. Wipe off dissolved grease with a damp cloth. Rinse with clean water. Heavily soiled surfaces may need some scrubbing.

Do not allow product to dry on surface.

Avoid contact with aluminum and painted surfaces.
