

G565 & G566

CEILING CLEANER DETERGENT (PARTS A & B)

This is an excellent two part cleaning system, which is extremely efficient at removing smoke residue, mold, mildew, soil and kitchen grease from porous ceilings. Ceiling Cleaner removes the heaviest soils while being gentle on the most intricate, textured ceilings. Its formulation contains optical brighteners that make the cleaned ceilings appear brighter.

DIRECTIONS: Mix 250 ml (8 oz) of Ceiling Cleaner Activator (Part B) to 4 litres of Ceiling Cleaner Detergent (Part A). Agitate both solutions in a holding tank before applying to ceiling. Spray this solution on the ceiling using a spray bottle or tank sprayer. Wet the ceiling uniformly, but avoid soaking ceiling tiles. Protect any furniture or surfaces that may be damaged by spray.

NOTE: Before applying Ceiling Cleaner, it is best to vacuum loose soil and dust from ceiling vents. After ceiling has been cleaned, wipe off lights, speakers, etc. with a sponge.
