HOT TANK CLEANER-STRIPPER N.F.

This product is a highly alkaline non-foaming cleaning compound designed for use in high pressure cabinet washers and hot tanks.

It is ideally suited for decarbonizing, paint stripping, rust removal and degreasing of ferrous metals. It is recommended as an excellent cleaner of radiators and engine blocks.

Not to be used on aluminum or other soft metals.

DIRECTIONS: Use 65 - 105 grams per litre (10-16 oz/gal) of water depending upon condition of parts to be cleaned. Best results are obtained using hot water. Do not add large amounts of powder to water at any one time. When adding powder to water solution, the temperature should not be over 50°C.

CAUTION: contains caustic soda
