LIQUID PARTS WASH

This product is an environmentally friendly aqueous solution designed for use in re-circulatory solvent washers, high pressure cabinet washers and for manual cleaning applications.

It is ideally suited for cleaning and degreasing soft metals, automotive components and machined parts.

This product is water-based, non-foaming and non-flammable, yet cleans like a petroleum solvent without the environmental and safety disadvantages. The corrosion inhibitor package will prevent rust and corrosion to cleaned parts and cleaning equipment.

DIRECTIONS: For heavy degreasing, use a 10% solution. For lighter degreasing, use a 2-5% solution depending on the condition of the parts being cleaned. Best results are achieved at 160-180°F (71-82°C). Remove excess grease prior to cleaning.
