TECHNICAL DATA SHEET

POWDERED DEFOAMER

This is a complex silicone based product designed to eliminate excess foam in cleaning operations.

It contains neutral granules coated with excellent foam inhibiting properties. It is an all purpose defoamer, which will work in a broad spectrum of cleaning products under a variety of conditions.

DIRECTIONS: It can be added directly into the recovery tank of automatic scrubbers, rug steam machines, etc. The recommended application rate is 2 – 8 grams per litre of recovery tank capacity (1/4 to 1/2 oz per gallon).

If the carpet to be cleaned has been cleaned previously with a rug shampoo machine, it may contain shampoo residue. In this case, foam will be produced when the hot water from the rug steam unit reacts with the shampoo residue. To prevent this foam from blocking the unit, sprinkle product lightly on the carpet before cleaning. Add defoamer to the recovery tank too, if necessary.
