TECHNICAL DATA SHEET

MT-1 MOP TREATMENT

This is a water based product designed for use on dust mops and cloths. The treatment imparts a positive charge on the fibers of the cloth or mop. This charge acts like a magnet to attract dust particles, which are negatively charged.

It will not harm or streak finishes and will wash out easily when laundered.

It also contains a sanitizer, which will control odors and bacteria.

The treatment is safe to use on all hard surfaced floors, woodwork, venetian blinds and on dust filters in heating systems or air conditioners.

DIRECTIONS: Spray the mop or cloth with mop treatment until damp, then allow it to dry. The mop is now ready to use and will work more efficiently than if untreated.

When the mop or cloth has been used, shake it well to release the dirt and dust trapped in the fibers.

Treatment should be repeated at least once a week if mops are being used frequently.

Wash the mop or cloth by machine or hand with laundry detergent, as required.
