SUPER 300 ACRYLIC SEALER

This product is a tough acrylic-based sealer especially designed to seal new floors and to re-seal floors after stripping. Most floor finishes will not adhere to porous surfaces such as concrete, linoleum or older asphalt and vinyl tile. The acrylic sealer fills the pores and forms a strong bond with the floor. The finish will then adhere to the sealer and ensure a strong resilient finish.

It restores gloss, colour and rich appearance on older floors while giving the floor excellent protection from dirt, soil and stains. This salt-resistant sealer will not yellow and is compatible with most finishes improving their performance.

DIRECTIONS: Apply sealer to clean, dry floor using a cotton mop, lambs wool applicator or roll on. Spread evenly over entire floor area. Avoid excessive agitation of product and do not allow material to dry in puddles. One litre will cover 35-60 square meters. Inspect for uniform coverage after product is dry.

NOTE: This product is not recommended for oiled or raw wood floors.
