REVIVE ENZYME CLEANER & DEODORIZER

REVIVE is a 10X concentrate deodorizer formulated to tackle malodor through a 3-step approach: 1) pleasant fragrance immediately displaces malodor 2) anti-odorants chemically bind and inactivate malodor, and 3) a highly active blend of non-pathogenic microorganisms and enzymes degrade organic soils. REVIVE is a low foaming cleaner with excellent detergency against soil and soot.

Ideally suited for cleaning and odour control in:

- fire restoration and smoke damaged rooms
- disaster remediation
- waste receptacles
- wastewater and landfill
- food service areas and kitchens
- washrooms and showers
- pet cages and litter boxes
- spoiled food, urine and vomit

REVIVE is a pH neutral, 100% biodegradable cleaner that is safe for users and the environment. This product is low-foaming, making it ideal for use in mop bucket, automatic scrubber and carpet/upholstery cleaning applications. It may also be applied by spraying or with fogging equipment. It is safe to use on all hard surfaces and does not require rinsing. The enzymes left behind will continue to digest organic waste long after application of this product.

DIRECTIONS: REVIVE performs best when diluted with warm water (20 - 50°C / 70 - 140°F). Shake well before use. Dilute with up to 10 parts warm water. Do not rinse.
