SOLVENT PRESPRAY

This concentrated ready-to-use lemon-scented solvent-based pre-conditioner is ideal for heavy soil removal from synthetic and non-synthetic upholstery, drapery, carpets and other fine fabrics prior to cleaning with extraction equipment.

By pre-spraying soils and stains such as food, oil, grease and body oils the chemical has a longer contact time, allowing for easier stain removal. Stubborn hard-to-remove stains may require an additional application of a solvent based spotter before final extraction.

DIRECTIONS: For pre-spraying upholstery: place furniture to be cleaned on a waterproof sheet before pre-spraying. Test fabric for colour fastness before using to make sure dye does not bleed or fade. Allow 5-10 minutes contact time before examining test area. Spray area to be cleaned with a liquid sprayer. Hold nozzle one foot above problem area and apply full strength in fine spray or mist. Allow 1 to 2 minutes contact time before cleaning. More contact time may be needed for heavy soiled stains.
