

L519

## WATER CONDITIONER

This is a specially blended product designed to soften water while sequestering iron, calcium, magnesium and other unwanted minerals present in the water. It will prevent the graying and yellowing of fabrics and is recommended in areas with poor water conditions. When used with chlorine bleach, it will prevent the bleach from causing the iron in the water turning fabrics yellow.

**DIRECTIONS:** Use 2-3 oz per load when using bleach. If no bleach is used, add 1-3 oz with detergent to enhance cleaning and whitening.

**FOR COMMERCIAL USE**
