

L533

TECHNICAL DATA SHEET

PRE-SPOTTER

This product is a quality spotter that removes most common fabric stains like grease, oil, lipstick, ballpoint pen ink, crayon, etc. It contains emulsifiers, solvents, surfactants, glycols, glycerine and optical brighteners.

DIRECTIONS:

Clothing Spot Remover: Apply spotter to the stain. Work it in thoroughly until the stain disappears. Flush with water or rewash. On stubborn stains such as marking ink, lipstick, some medicines and many unknown stains, work spotter in until the stain no longer bleeds. Several applications may be necessary. Flush thoroughly with water.

Pre-Spot Remover: Apply spotter to the stain or spot and leave it on the fabric for at least 5 - 10 minutes before including it in the general wash load.

NOTE: A stain is best removed before it goes through the wash cycle. An old stain already gone through washing and drying cycles becomes set and is always harder to remove.
