## OS-15 OXYGEN SCAVENGER

This product is a concentrated sodium sulphite solution designed to be used as an oxygen scavenger in steam boilers. It is a stable solution and being a liquid, there are no dissolving or plugging problems.

**DIRECTIONS:** Estimate the amount of water in the boiler. As a recommended treatment, add 1 part to 3000 parts of water in the system. Enough product should be added to the make-up water to provide a constant sulphite reading of 50-100 ppm.

The boiler water should be tested daily. The sample of boiler water to be analysed should be taken prior to blow down. A few gallons should be passed through before taking the sample.
