

S772

TECHNICAL DATA SHEET**PBT-20
POLYMER BOILER TREATMENT**

This is an effective scale conditioning additive that inhibits the formation of hard scale deposits. It controls deposition of scale by crystal modification and is effective against both calcium and magnesium water hardness. This product will also aid in the prevention of accumulation of solids in areas of poor flow. It is ideal for food plant and other industrial use.

DIRECTIONS:

Use at 1 litre per 5000 - 10,000 litres of water.

NOTE:

Not for use in steam when steam is used in direct contact with food or food surfaces.

COMMERCIAL USE ONLY
