SCALE INHIBITOR RTU

This product is a Ready-To-Use scale inhibitor that prevents hard water scaling in pressure washer heating coils. It is safe to use on all surfaces and is compatible with all pressure wash detergents. This product prevents scaling by chelating divalent mineral ions and by disrupting mineral crystal formation and growth. Mineral scale is an insulator, making the heating coil less effective. Routine use of this product will maintain the heating coil, extend the time before acid descaling is required, result in better cleaning by using hotter water, and prolong equipment life.

DIRECTIONS:

This is a Ready-To-Use product. Do not dilute. Measure water hardness in your area. The harder the water, the more inhibitor that will be required to protect the heating coil. Set your pressure washer service switch according to the water hardness:

CaCO ₃ Hardness (grains per gallon)	CaCO ₃ Hardness (ppm, mg/L)	Service Switch Position to add Scale Inhibitor
<1	<17	OFF
1 - 5	17 - 85	1
5 - 10	85 - 170	2
10 - 15	170 - 255	3
15 - 20	255 - 340	4
