LIQUID ANTICHLOR

This product is a liquid solution for the effective removal of chlorine residue. It is designed for use in laundry applications where the carry over of bleach may result in left over chlorine content in the finished linen. Chlorine residue may result in tensile strength loss and fabric deterioration.

DIRECTIONS: Liquid Antichlor should be introduced in the rinse cycle following the bleach cycle at a suggested ratio of 1/4 cup (2 oz.) per 50 lbs of linen. Amount used may vary depending on amount of chlorine present.
