ULTRA LIQUID LAUNDRY ALKALI

Laundry Alkali is used to boost the cleaning power of liquid laundry detergent in the first stage of the laundry formula. It is an excellent additive for heavily stained or greasy loads. It provides exceptional emulsification and saponification along with de-flocculation of heavy soils in laundry. It is not recommended for use on delicate synthetics or delicate natural fibres such as wool or silk.

DIRECTIONS: Use 1/2 to 3/4 cup (4-6 oz) per 100 lb load in combination with liquid laundry detergent. For normal wash load operations, use enough alkali to provide the wash solution with a pH of 11 - 11.5.
