ULTRA LIQUID SOUR

This product will neutralize residual alkalinity in commercial laundry applications. It is required when using highly alkaline detergents or laundry alkali and will ensure that no harsh chemical residue remains in the linen. It will also contribute in the elimination of natural alkalinity in rinse water and in the prevention of skin irritation.

This product contains rust preventing properties which reduce the yellowing of linen in areas using water with high iron content.

DIRECTIONS: Use 1/4 to 1/2 cup (2 - 4 oz) per 100 lb load. Adjust the amount to achieve a pH of 6 - 6.5 in the last rinse cycle.

COMMERCIAL USE ONLY
