# TECHNICAL DATA SHEET

## RX-10 GRAPE

RX-10 is a concentrated drying agent fortified with Carnauba Wax for advanced surface protection, improved shine and water repellency on automotive surfaces.

RX-10 is applied after the wash and immediately before the final rinse. It chemically bonds to the vehicle surface, producing better water beading and breaking, resulting in improved blower efficiency and a spot free finish.

RX-10 is a brilliant yellow colour even when diluted and has a strong grape fragrance. It may be used with foaming spray nozzles for added show.

### **DIRECTIONS:**

RX-10 may be diluted up to 300 parts with water. For extra wax protection and faster drying, use at a higher concentration for desired results.

**COMMERCIAL USE ONLY**
