ORANGE PEEL DEGREASER

This product is the environmental choice for heavy oil, bitumen and tar removal. It is formulated with citrus terpenes derived from orange peels and 100% biodegradable emulsifiers and surfactants. This product will literally peel tar and oil from equipment. When mixed with water according to the directions, it forms a semi-thick paste that will cling to a vertical surface like glue. This maximizes contact time and effectiveness compared to traditional liquid degreasers which run off vertical surfaces. The product is user friendly: it is non-flammable, has a low odour and is environmentally responsible.

DIRECTIONS: This product may be used straight or mixed using one part product to two parts water (1:2) to form a semi-thick paste. It can be applied with a sprayer or directly with a brush. Allow contact time, then spray off with hot water.
