

E419

COMPATIBILITY AGENT

ACTIVE INGREDIENTS:

90% Alkylethoxy phosphate esters and methyl alcohol

Physical State:	Clear Liquid
Specific Gravity:	1.051
Freezing Point:	-12°C
pH:	2.4
Flash Point:	25°C

This specially formulated product is ideally suited to improve compatibility and stability of liquid fertilizer-pesticide mixture. It provides excellent oil emulsification and hard water compatibility while being a superior coupling agent with high electrolyte tolerance.

DIRECTIONS: When mixing herbicides or pesticides with water or liquid fertilizer solution add 1.25L to 3.75L per 1000L of solution (16 - 48 oz per 100 US gallons). The amount of compatibility agent needed will depend on the rate of herbicide or pesticide used. When sulphur containing fertilizers are used the higher rate of compatibility agent is recommended.
