## BLEACH FOAM ADDITIVE

This product is a concentrated sodium hypochlorite bleach-stable, high foaming surfactant package. It is added to bleach solutions to increase wetting, detergency and dwell time on vertical surfaces. Rather than all the bleach solution rapidly running off and drying, the additive creates stable suds that prolong exposure and effectiveness. The pleasant smell of cherry also helps mask the offensive chlorine odour.

### DIRECTIONS:

Use 10 – 25 mL of additive per 1L of bleach solution. Usage levels will depend on user preference, the concentration of bleach, the desired density and smell. This product may be used with a pressure washer. For best results and maximum cling, apply with a foam cannon. Do not allow product to dry or bake on surfaces. Rinse thoroughly.

For maximum effectiveness, prepare fresh solution for every use. Premixed solution is stable for days, however diluted bleach loses activity over time.
