## TECHNICAL DATA SHEET

## VEGESOL

VegeSol is a clear, semi-viscous powerful degreaser that rapidly penetrates and emulsifies grease, oil, tar and asphalt. It is a fully biodegradable methyl ester-based emulsifier which is derived from sustainable vegetable oil origins. It is non-corrosive, non-combustible and unregulated for transport. The semi-viscous nature of VegeSol allows it to cling to a vertical surface for longer than most degreasers and with less evaporation, increasing dwell time and effectiveness. This low odour degreaser works better than petroleum solvents, butyl solvents and chlorinated solvents, without their adverse health, safety and environmental challenges.

VegeSol is ideally suited for heavy industrial applications. It softens and emulsifies hardened tar and asphalt for easy removal. It effectively removes soil, heavy oil and grease.

**DIRECTIONS:** This product is designed to be used at full strength. Remove any excess soil before applying product. Apply liberally to the area being cleaned. For hardened tars and asphalts, allow as much dwell time as possible to soften it without allowing the product to dry. Light scrubbing may be required on heavily soiled areas. Best results are obtained when rinsing with steam or hot water using a power washer.

**CAUTION:** This product has excellent solvency. Avoid excessive contact time on plastics, soft rubbers and painted surfaces. Always spot test to ensure compatibility.
