HOT TANK CLEANER - ALUMINUM

This product is a superior cleaner specially designed for use in high pressure cabinet washers and hot tanks. It is ideally suited for decarbonizing, and degreasing of aluminum and other soft metals. It is recommended as an excellent cleaner of transmission components, engine parts, brake drums and gears.

This is an alkaline product containing silicates, detergent builders, rust inhibitors, water conditioners and surfactants.

DIRECTIONS: Use 40-80 grams per litre (6-12 oz/gal) of water depending upon condition of parts to be cleaned. Best results are obtained using hot water. In hot tanks, the temperature should be kept around 80°C-90°C (180°F-200°F).
