ALKALINE DRAIN OPENER

This product is an industrial grade, caustic drain opener. It rapidly settles to the lowest point in plumbing where the obstruction is blocking flow, chemically degrades the clog and restores normal flow. The caustic readily saponifies animal fat and grease, degrades protein and hair, and fragments fibrous material.

This product is ideal for use in clogged kitchen drains, bathroom drains, septic tanks and grease traps.

DIRECTIONS:

Remove excess water, debris and organic material from clogged plumbing. Carefully pour a liberal amount of product directly down the clogged plumbing (250 – 500mL). Allow 30 minutes of dwell time. Flush with straight hot water. If drain does not open, recharge plumbing with an extra dose of product and allow to stand overnight. Flush with straight hot water.

CAUTION:

This is a strong caustic product. It is very corrosive. Always wear eye and skin protection when handling this product. Avoid contact with painted surfaces, chrome and aluminum.
