

J540

DUO**ALCOHOL & QUAT BASED SPRAY SANITIZER
FOR HARD SURFACES AND HANDS****Food Contact Hard Surface Sanitizing:**

Thoroughly clean non-porous surface with detergent and then rinse with potable water. Allow to drain completely. Apply DUO undiluted and uniformly over the entire surface using spray equipment. No rinse is required. DUO will provide 200 ppm active quat sanitizing.

Hands and Gloves:

DUO may be used to sanitize bare or gloved hands. DUO will be most effective when hands are washed with soap and rinsed with potable water prior to applying. Remove excess product from hands or gloves to minimize transfer of sanitizer to food products or food contact surfaces.

General Surface Sanitizing:

Spray DUO onto contaminated surface, wipe clean with paper towel. Discard paper towel. Spray again with DUO and allow surface to remain wet for 60 seconds. Let surface air dry.

CONTAINS: isopropyl alcohol, citric acid and quaternary ammonium chloride
