

S775

H-100 GLYCOL

This product is an inhibited ethylene glycol antifreeze and heat transfer fluid of medium toxicity.

It is a clear, colourless liquid with practically no odour that is easily mixed with water.

H-100 Glycol is hygroscopic at low temperatures and as such will attract moisture from the surrounding atmosphere.

The inhibitor package has excellent thermal stability for bulk fluid temperatures up to 350°F and maximum film temperature of 400°F.

This product is well suited for use as antifreeze in heating systems at proper dilutions with water and is compatible with our boiler compounds recommended for such operations.

H-100 Glycol/Water mixture:

| % Glycol By Volume | Freezing Point °C |
|--------------------|-------------------|
| 20% | -9 |
| 30% | -16 |
| 50% | -36 |
| 60% | -52 |
| 70% | -64 |
