TECHNICAL DATA SHEET

BLOOD OUT

This product is a laundry pre-spotter formulated to neutralize and emulsify blood stains in linens before they set during the laundering process. It is ideal for removing blood staining from butchers smocks and hospital garments.

DIRECTIONS: Spray or pour product directly on the blood stained area of fabric. Work it into the stain for best results. Launder the fabric with an alkaline detergent, ideally using a hot water wash. If stubborn blood stains persist after the wash cycle, repeat the process a second time – do not dry until staining is removed, otherwise stains will set in the fabric.
