## OXYDET H.D. LAUNDRY DETERGENT

This product is a highly concentrated alkaline laundry detergent, compounded with colour-safe oxygen bleach, medium-sudsing detergents and optical brighteners to provide excellent soil removal and brilliant whites and colours. This is a "one shot" product of high alkalinity. The low water temperature requirement of 48°C (120°F) reduces energy used and provides additional cost savings. It is ideal for commercial shirt laundries and requires little or no pre-treatment of collars or cuffs. For particularly stubborn stains, use it as a presoak.

**DIRECTIONS:** For top loading domestic type washers, add 1/2 to 3/4 cups per load. More may be required for heavy soil conditions. This product is also ideally suited for high-efficiency domestic washers at a reduced amount.

For use in commercial machines, use 1/2 to 3/4 cups (4-6 oz.) of detergent for each 50 lbs of dry fabric. This product may be used with any water temperature up to 63°C (145°F).

**COMMERCIAL USE ONLY**
