## DRYCLEANING DETERGENT

An ultra-concentrated cationic detergent for use with perchlorethylene drycleaning machines. This detergent is formulated with fully biodegradable synthetic surfactants and is phosphate free. It effectively cleans synthetic and natural fibres. The cationic softeners prevent electrostatic charge buildup, reduce lint formation and impart a soft handle to textiles. Ironing time is markedly reduced with use of this detergent.

**DIRECTIONS:** This is an ultra-concentrated detergent. Use as little as possible to achieve the desired results, as per your machine's operating instructions. This product may be also used as a pre-spotter and applied directly to stains prior to drycleaning.
